### NOTE 1

When the CTC channel is set to value 000, the fixture will output a different calibrated white depending on the LED configuration of the fixture.

**P-3 Wash POI RGBW3000K:** 3000K calibrated white

**P-3 Wash POI RGBW4000K:** 4000K calibrated white

**P-3 Wash and P-3 Wash POI RGBW5700K:** 5600K calibrated white

### NOTE 2

RGB(W) strobe effect on a separate layer, on top of RGBW pixels, controllable via Rate and Duration on the panel. The Red, Green, Blue and White Strobe channels can be combined to achieve a mixed RGBW strobe on top of a mixed RGBW background or RGBW pixel control. In calibrated modes, combine the Red Strobe, Green Strobe, and Blue Strobe, to achieve a calibrated White Strobe.

The White Strobe channel is only available in RAW modes that also include a White channel

### NOTE 3

- **CTC RGB** allows RGBW mixing with CTC control over white on the Red, Green and Blue channels (4000K White LED is controlled via RGB color engine).
- **CTC RGBW** allows RGBW mixing with CTC control over white on the Red, Green, Blue and White channels (4000K White LED is controlled via RGBW color engine).
- **CTC RGB+W** allows RGB mixing with CTC control over white on the Red, Green and Blue channels, plus independent control over 4000K White LED on the White channel (4000K White LED is not part of the color engine).
- **HSI** and **CMY** modes use the Red, Green and Blue channels for the color mix.
- **xy** mode does not allow CTC control.

CTC RGB, CTC RGBW, CTC RGB+W, HSI, and CMY modes can be combined with the CTC, Color Path, Macro, and Plus/Minus Green channels.

### NOTE 4

- **Smooth Gamma Corrected** is compatible with previous SGM products.
- **Halogen** creates an organic delay, similar to tungsten-lamp performance when filament is heated up.
- **Fast Gamma Corrected/Linear** allows for a faster response to the incoming DMX signal. Using this dimming curve might result in less smooth dimming fades.

### NOTE 5

With the Color Path set to **VersaPath™**, the color emulation reacts in the same way as a physical filter over a specific native color temperature (from 2000K to 10000K), editable via the CTC channel.

When Dimming Curve channel is set to Halogen, a "tungsten-lamp with color filter" look can be achieved.

When the Color Path is set to **VersaPath™**, the CTC channel can be used to move the RGB color mix over the black-body curve. In order to achieve this, at least 2 primary colors need to have values above 000.
